**Self-sufficiency in mineral based metals**

818. SHRI S. MADHAVAN; Will the Minister of MINES be pleased to state:

(a) whether Government are working on a long-term strategy to acquire self-sufficiency in mineral based metals; if so, what are the details in this regard;

(b) whether Government are considering to allow foreign collaborations on product sharing basis in the production of copper, tin, lead and zinc; if So, what are the details thereof; and

(c) whether Government propose to go in for massive Aluminium plants on product sharing basis in the foreign collaborations and if so, what are the details in this regard.

THE MINISTER OF STATE IN THE MINISTRY OF MINES (INDEPENDENT CHARGE): (SHRI BALRAM SINGH YADAV) (a) Achievement of self-sufficiency in mineral based metals is dependent on the availability of adequate ore reserves amenable to economic exploitation. The long-term Govt, strategy to acquire self-sufficiency envisages development of mineral resources 'taking into account the national and strategic considerations and ensure their adequate supply and best use keeping in view the present needs and future requirements as spelt out in the National Mineral Policy (for non-fuel and non-atomic minerals). The development strategy for mineral based metals has been guided by the above objective.

The ore reserves established so far in respect of non-ferrous metals will enable achieve and maintain self-sufficiency in aluminium in view of the very large reserves of bauxite in the country. Self-sufficiency in Aluminium has already been achieved in 1989-90 and plans are being drawn up for maintaining self-sufficiency for this metal in the long-term. In respect of other major non-ferrous metals like copper, lead, zinc and nickel, ore resource endowment assessed is inadequate for achieving self-sufficiency. Ore reserves for tin and gold are poor. Priority has therefore been given for exploration for non-ferrous metals like zinc, lead, copper, tin and gold to augment the ore reserves.

(b) and (c) No Sir.
